# **Tree Inventory Report**

## **Multiple Parks**

## **Frankfort Square Park District**

### **Scope**

This tree inventory report includes all Frankfort Square Park District park properties managed by the District and acreage owned by the five public schools within the District, where the Frankfort Square Park District also plants and maintains trees.

Field data has been entered into GIS for easy access and updating.

This report will provide the basis for the development of a long-term Forestry Management Plan for the District.

### **Criteria and Methodology**

All trees [shade, evergreen, and ornamental] are included on the survey maps. Generally, if the trees were 2.5 inches dbh or under they were not tagged for fear of damaging the tree. Occasionally, if trees were 2.5 dbh or under yet were well established [such as some *Malus* cultivars] they were tagged and if a distinct group of trees all measured above 2.5 dbh except for one or two members of the group, they were also tagged. If trees had multiple trunks or low branches, the diameter was taken below the point of trunk/branch division. If multiple trunks occurred at ground level, the diameter of all trunks was measured and the total recorded. Spontaneous trees that are considered "weedy" such as Box Elder, White Mulberry, or Siberian Elm and occurred in groves or along stream corridors were not tagged but recorded on the maps as groups. If a particular "weedy" tree was considered to have redeemable features, the tree was tagged and mapped at the discretion of the surveyor. Otherwise, dominant species were recorded for these spontaneous tree groups. Evergreen trees that were branched to the ground were recorded by height.

Health problems of the tree trunk [girdling, mower damage] or crown [major broken or dead branches] were recorded. If damage occurred in the past and the tree has since healed, no indication of damage was recorded.

Whenever possible, tree tags were placed on the side of the trunk that was less visible to the public. Tags on trees in parkways were placed on the side of the tree facing away from the road so as not to distract motorists. Tags were placed 5 to 6 feet above ground unless an obstruction or the size/angle of the trunk made it prohibitive. In such cases, tags were generally placed at the highest appropriate point. In most cases, tags were not secured tightly against the tree to allow tree growth to occur before the tag becomes imbedded in the trunk.

# **Recommendations**

## **General Recommendations**

### **Pruning**

Many of the trees recorded in this survey will benefit from dormant season pruning. Dead wood, crossing branches and broken branches are the primary concern. Correcting these problems while the trees are young will produce healthier trees that are less prone to wind damage and have a better overall appearance as they mature.

### **Mulching**

Mulch placed around the base of trees will help minimize mower damage to their trunks and reduce competition from turf grass. Most trees have been mulched, but there are still some smaller trees that would benefit from mulching. Care must be taken to not place mulch against the trunk of trees.

### **Selection**

The introduction of the emerald ash borer into northern Illinois is a serious threat to all species of Ash trees in the region. As shown in Appendix D, there are 276 Ash trees [*Fraxinus spp.*] planted in the parks. Any new tree plantings should exclude species of Ash.

Only 44 Oaks [*Quercus spp.*] were encountered in the survey. Before farming and suburban development, Oaks were the dominant native tree in our area. They are hardy, long-lived, and should be planted more often in the future.

Other under represented species that we recommend for planting include Musclewood [*Carpinus caroliniana*], Redbud [*Cercis canadensis*], Kentucky Coffee Tree [*Gymnocladus dioicus*], Black Walnut [*Juglans nigra*], Ironwood [*Ostrya virginiana*], and Sycamore [*Platanus occidentalis*]. Redbud, Black Walnut, and Sycamore are not recommended for planting in parkways.

Generally the District should plan their future tree selections to achieve a diverse inventory where no single species would comprise more than 15% of the total. Appendix A lists trees not recommended for planting.

### **Site Conditions**

Trees selected for future planting should be matched to their place of planting. Trees that are adapted to flooding and wet soils should be chosen for park areas that are poorly drained and experience ponding after rains. Trees that prefer well-drained soils should be chosen for berms and steeper slopes. Highly disturbed and compacted soils are appropriate locations for trees that are native to the poorly drained soils of floodplains. Trees that are large at maturity should not be planted in tight spaces that cannot accommodate their ultimate size. Care taken to select trees that are appropriate to their location will result in healthier trees that require less maintenance.

## **Site Specific Recommendations**

### **Ridgefield Park**

Trees tagged in the lawn on the north side of the pond are mostly native and non-native opportunistic species and should be replaced by more desirable species. A grove of Box Elders [*Acer negundo*] should also be removed.

### **Newfield Park**

The lawn area to the north should remain as open lawn for recreation purposes. New trees should be planted in perimeter areas.

### **Dr. Julian Rogus School/Park**

Several Red Maples [*Acer rubrum*] and Little-leaf Lindens [*Tilia cordata*] have major trunk damage which may be contributing to the crown dieback exhibited in several trees. Unless their condition improves, these trees should be replaced.

### **LaPorte Meadows Park**

There is a good diversity of species in this park including the best representation of Oaks in the park system. However, it is evident that many of these newly planted trees need to be re-planted. Many are leaning and need to be made plumb and at least 3 or 4 have blown over completely. Backfilling around several tree root balls is haphazard and should be corrected.

### **White Oak Park**

In this park in particular and occasionally elsewhere, mulch has been mounded around the base of each trunk, this can result in disease. The mulch should be moved away from the face of the trunk and care should be taken to avoid this practice in the future.

## Appendix A: List of Existing Parks

Park	ID
Community Center/Island Prairie	C
Community Park	B
Crystal Lake Park	Q
Dr. Julian Rogus School/Park	D
Frankfort Square School/Park	E
Greenway Park	Z
Hawthorne Lakes	BB
Hoffman Park	F
Hunter Prairie Park	G
Indian Boundary South Park	H
Indian Trail School/Park	I
Kingston Park	J
Kiwanis Park	K
Lake Of The Glens Park	A
Lakeside Park	V
LaPorte Meadows Park	S
Lighthouse Pointe Park	T
Newfield Park (No existing trees)	W
Odyssey Park	L
Plank Trail Park	P
Ridgefield Park	X
Shimmering View Park	R
Square Links Golf Course	Y
Summit Hill School/Park	M
Union Creek Community Park	N
Walnut Creek	AA
White Oak Park	U
Woodlawn Park	O

## **Appendix B: Prohibited Trees**

The following trees are not recommended for planting due to their catastrophic pest susceptibility [Ash], invasive/weedy qualities, or their nuisance fruit.

<b>Scientific Name</b>	<b>Common Name</b>
<i>Acer platanoides</i>	Norway Maple
<i>Ailanthus altissima</i>	Tree-of-Heaven
<i>Alnus glutinosa</i>	Common Alder
<i>Elaeagnus angustifolia</i>	Russian Olive
<i>Fraxinus</i> [all species]	Ash
<i>Ginkgo biloba</i> [female]	Female Ginkgo
<i>Morus alba</i>	White Mulberry
<i>Populus alba</i>	White Poplar
<i>Robinia pseudoacacia</i>	Black Locust
<i>Ulmus pumila</i>	Siberian Elm

## Appendix C: List of Existing Tree Species

<b>Tree ID</b>	<b>Scientific Name</b>	<b>Common Name</b>	<b>Label</b>
64	<i>Abies fraseri</i>	Fraser Fir	AF
